Photography Method

Basic knowledge of photo editing – masking, resizing, copy & paste as new image, etc. No worries if you are unfamiliar with certain procedures. Get a family member or friend to help. These pieces are designed to be deciphered. It just takes a little patience.

I plan on producing Trithemian Web™ originals that are not destined for the NFT marketplace even though they are still 100% digitally designed. The printed version will be a LumaChrome HD or canvas using oil based inks. These prints will display the spider web containers along with the keyword needed to decipher the piece. No digital file will be necessary to discover the title of the piece and the message it contains. The spider will indicate where the keyword is located. Read about the different spiders in the 'Decryption' documentation.

Now that you know where the keyword is based on the spider, get your camera or phone out.

Take a close up of each container. Open one of the container photos in your photo editing program. Correct perspective distortion, if any. Resize the image to fit on a standard sheet of paper. I find that 7" x 7" is a good size. Print the image using fine or quality print resolution. The higher quality makes the lettering easier to read. Do the same for all the container images and print each one.

Now you can follow the 'Sighting' and 'Decryption' documentation to decipher the piece.

Have fun!
